

HUDSON RIVER FISHERMEN'S ASSOCIATION

Box 725

Ossining, New York 10562

March 18, 1972

Dr. James R. Schlesinger
Chairman,
Atomic Energy Commission
Washington, D. C. 20545

My dear Dr. Schlesinger:

Yesterday's New York Times reported your proposal that the Atomic Energy Commission be allowed to issue so-called "interim" operating licenses to nuclear power plants (completed but not licensed) through June, 1973, without having to submit the final environmental impact statements required by the National Environmental Policy Act.

The Atomic Energy Commission released their own study (Docket No. 50-247; December 30, 1971) dealing with Consolidated Edison Company's Indian Point Plants (1 and 2) at Buchanan, N. Y. Speaking on the subject of fish kills by Indian Point Plant No. 1, the study credits this plant with killing five million fish since going on the line in 1963. Indian Point Plant No. 1 has been out of service almost as much as it has been in service. One would have to double the fish-kill figures had this plant stayed on the line constantly.

On March 1, 1972, the New York State Department of Environmental Conservation ordered Indian Point Plant No. 2 to cease operating all circulators. This order came as a result of over 100,000 fish being killed over a brief four-day period (February 23rd - 26th).

Your recommendation that the requirements stipulated in the National Environmental Policy Act be set aside would allow Indian Point Plant No. 2 to go on the line free of the restrictive chains of environmental responsibility. The recent fish kills by this plant were not the first attributed to it. Indian Point Plant No. 2 has a record of fish kills that can only be called disastrous.

The Atomic Energy Commission study admits that the operation of Indian Point generating facilities poses a real threat to fishlife in that portion of the Hudson River (effected by water withdrawal and thermal discharge). An annual mortality of 25% of striped bass eggs and larvae is anticipated (AEC's figures).

In the name of "expected power emergencies" you are asking that a moratorium be declared on environmental concern. This moratorium would be in effect until June, 1973. And after June, 1973? You are aware, I'm sure, of the momentum theory: Once a thing has been put in motion, attempts to stop it are frequently futile. A massive force in motion (An unrestricted AEC) generates tremendous momentum. Once you have been allowed to circumvent existing policy, who will be able to stop you? Will you be able to brake your own momentum. Perhaps it is more to the point to ask if you will want to brake this momentum.

Freed of environmental restraints by a special act of Congress, allowed to operate for one year beyond the dictates of the National Environmental Policy Act, damage done to the environment by nuclear plants will be incalculable.

In the manufactured climate of "expected power emergencies" you are asking that gains made for environmental protection be relinquished.

Consolidated Edison Company's record on the Hudson River is well documented in Robert H. Boyle's book THE HUDSON RIVER (W. W. Norton & Company, Inc. 1969). Through the efforts of the Hudson River Fishermen's Association, Consolidated Edison has been forced to recognize their environmental responsibilities. Gradually, a certain detente has been established between both organizations. You now will make it possible for the utility to assume its earlier posture of environmental indifference.

Those utilities involved in your proposal will applaud your action. Environmental groups involved (directly) in your proposal will view it as a cynical act.

Your appointment as Chairman of the Atomic Energy Commission was seen by many as a turning point in the AEC's history. A new man; a different philosophy; an AEC with a conscience. You have the chance to vindicate this judgement. I hope you will take it.

Sincerely,

D. M. Seymour

Garrison, New York 10524

Dear Mr. Seymour:

With reference to your letter of March 18, 1972, we appreciate your concern regarding interim licensing of nuclear power plants and environmental matters, particularly in relation to Consolidated Edison's Indian Point Unit No. 2.

At the present time, a bill to add a new Section 192 to the Atomic Energy Act which would provide for interim licensing of some nuclear power plants has been passed by the House of Representatives, the Senate, and is now before the President. The bill would provide for issuance of operating licenses for nuclear power reactors such as Indian Point Unit No. 2, where electrical energy is needed to meet specified energy needs, even though the full term license is being contested. The issuance of a temporary license would not deprive the public of a full review of the health and safety and environmental matters which may be contested nor would it prejudice the position of any party who is participating in the contested hearing on the full-term license. If any temporary license is issued by the Commission, the final Commission action would be subject to judicial review under the Administrative Orders Review Act of 1969.

The Commission is also well aware and concerned about the potential mortality of fish eggs and larvae and the recent fish kills during testing of two of the circulating pumps of the intake structure of Indian Point. This subject, as well as the critical need for power for the New York Metropolitan area, is addressed in the enclosed copy of the Draft Detailed Statement on Environmental Considerations of Indian Point Unit No. 2, dated April 13, 1972. The Draft Statement describes in the summary and conclusions the action planned by the Commission to minimize the environmental impact from operation of this plant. After the 30-day period for comments from Federal, State and local agencies and the public is completed on June 2, 1972, the Commission will prepare the Final Environmental Impact Statement on this plant.
