CONSOLIDATED EDISON COMPANY)
OF NEW YORK, INC.)
POWER AUTHORITY OF THE STATE) Docket No. 50-286
OF NEW YORK)
(Indian Point Station,)
Unit No. 3))

APPLICATION FOR AMENDMENT TO
OPERATING LICENSE

Pursuant to Section 50.90 of the regulations of the Nuclear Regulatory Commission, Consolidated Edison Company of New York, Inc. ("Consolidated Edison"), in its own right and as agent for Power Authority of the State of New York as joint holders of Facility Operating License No. DPR-64, hereby applies for an amendment to the Indian Point Unit No. 3 Technical Specifications contained in Appendix A to that license.

Specifically, Consolidated Edison requests changes to the Technical Specifications to permit the removal of the part length control rods from the reactor vessel. Approval of the requested Technical Specification changes will facilitate the part length control rod removal during the first refueling outage scheduled to begin in the Spring of 1978. It is therefore requested that this Amendment be issued by April 1, 1978. Although Technical Specification 3.10.4.5 must be deleted as part of this Amendment, the provisions of this specification will be adhered to until the part length control rods can be removed.

P PDR

The proposed Technical Specification changes consist of the specific revisions set forth in Attachment A to this Application. A safety evaluation of the proposed changes is set forth in Attachment B to this Application. This evaluation demonstrates that the proposed changes do not represent a significant hazards consideration and will not cause any change in the types or increase in the amounts of effluents or any change in the authorized power level of the facility.
