Gentlemen:

Enclosed for your use are copies of proposed Regulatory Guides 1.AA, 1.BB, 1.CC, 1.DD, 1.EE and 1.FF. The intent of these guides is to provide the NRC methods for the pre-operational calculation of effluent releases, dispersion of effluents in the atmosphere and water bodies, associated radiation doses to man, and cost-benefit analysis.

You should note that these are draft guides that could be revised before final publication. Their use by you in licensing actions poses some risk due to changes that may occur prior to final publication.

Because of the volume of the documents and their draft nature, only one copy is being made available to any one organization at any one location. Since there is no copyright on government produced material, you may make as many copies as you need.

Sincerely,

Daniel R. Muller, Deputy Director
Division of Site Safety and
Environmental Analysis
Office of Nuclear Reactor Regulation

Light Water Reactor Branch No. 5
Division of Project Management
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Vassallo

As requested by members of the NRC Staff at a meeting held on February 13, 1976, attached are Consolidated Edison's positions on the following two items addressed in the Dames and Moore Report entitled "Supplemental Geological Investigation of the Indian Point Generating Station" (Issue date December 5, 1975; Supplement date January 19, 1976).

1. ATTACHMENT 1 - Seismic Anomalies In The Hudson River
2. ATTACHMENT 2 - Regional Geothermal Events

Also forwarded herewith are forty (40) copies of Plates K-8, K-12, K-17, K-19, and K-23 of the above-mentioned report. These color plates supersede the respective black-and-white plates previously submitted in the January 19, 1976 supplement.

Very truly yours,
