REGULATORY DOCKET FILE COPY

March 15, 1976

Re Indian Point Unit No. 3
Docket No. 50-286

Director of Nuclear Reactor Regulation
ATTN: Mr. R.C. DeYoung
Assistant Director for
Pressurized Water Reactors
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. DeYoung

By letter dated October 10, 1975, we provided a listing of finalized versions of all safety - related electrical drawings reviewed by the NRC Staff during the Indian Point Unit No. 3 operating license proceeding. As a result of further review by the NRC Staff, additional design changes were required necessitating the revision of several of these drawings.

In two separate transmittals on March 8, 1976, we forwarded finalized versions (7 copies) of drawings affected by design changes to (1) provide redundant position indication in the control room in accordance with NRC Branch Technical Position EICSB 18 for valves de-energized to meet the single failure criterion and (2) to permit restoration of power to valves 842 and 843 from the control room.

This instant submittal forwards herewith finalized versions (7 copies) of other safety-related drawings which were also revised as a result of the NRC Staff's review. A listing of these drawings is provided in Enclosure 1

Enclosure 2 updates the overall listing forwarded to you on October 10, 1975 to include those drawings being forwarded to you with this letter and those sent to you in the two separate transmittals on March 8, 1976.

Mr. R.C. DeYoung

- 2 -

March 15, 1976

The Commission will be kept informed of changes to safety-related systems in accordance with the provisions of 10CFR50.59 of the Commission's regulations.

Very truly yours

William J. Cahill, Jr.
Vice President
