REGULATORY DOCKET FILE COPY

November 8, 1974

Re Indian Point Unit No. 3
AEC Docket No. 50-286

Mr. Edson G. Case, Acting Director
Directorate of Licensing
U. S. Atomic Energy Commission
7920 Norfolk Avenue
Bethesda, Maryland 20014

Dear Mr. Case

In response to your letter of October 9, 1973 and as stated in our letter of September 20, 1974, an additional report has been prepared that specifically addresses the "Anticipated Transient Without Trip" response for plants which contain Series 44 steam generators. This report, "Anticipated Transient Without Trip Analysis for Westinghouse PWR's With Series 44 Steam Generators", (WCAP-8404) was submitted by the Westinghouse Electric Corporation by letter dated October 28, 1974 from Dr. Romano Salvatori to Mr. D.B. Vassallo. The report completes the analysis performed for Indian Point Unit No. 3 in responding to the recommendations set forth in WASH-1270.

This same report (WCAP-8404) will augment the two previous Westinghouse Topical Reports WCAP-7486 and WCAP-8330. The analysis discussed in these three reports demonstrates that no hardware modifications are required to mitigate the consequences of ATWT.

Very truly yours

Carl L. Newman
Vice President
