Re: Indian Point 3  
Docket No. 50-286

Director of Nuclear Reactor Regulation  
ATTN: Mr. Robert W. Reid, Chief  
Operating Reactors Branch # 4  
Division of Operating Reactors  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Dear Mr. Reid:

Forwarded herewith for your information are (12) twelve copies of a Westinghouse report entitled, "Proposed In-Service Ultrasonic Examination and Structural Appraisal of Clad Steam Generator Channel Heads." This report describes the results of the development program committed to in Item 2(c) of Enclosure 2 of our November 12, 1975 letter to Mr. Richard De Young. Con Edison and the Power Authority have reviewed this report and believe that the inspection and evaluation procedure described therein will satisfy the surveillance requirement of Item 3.7 of Table 4.2-1 of the Appendix A Technical Specifications.

The Power Authority intends to use the inspection and evaluation procedure described in the report during the refueling outage tentatively scheduled for the Spring of 1978 to fulfill the technical specification requirement (Item 3.7 of Table 4.2-1) for ultrasonic examination of steam generator head welded clad surfaces. In order to facilitate our planning for the refueling outage, please advise us prior to February 15, 1978, if you have any comments on this program.

Very truly yours,

A handwritten signature in dark ink, appearing to read "William J. Cahill, Jr.". The signature is written in a cursive, flowing style with some loops and flourishes.

William J. Cahill, Jr.  
Vice President
