QUALITY ASSURANCE INDIAN POINT UNIT NO. 3

In our February 19, 1968, request to Consolidated Edison for additional information relative to Indian Point Unit No. 3, we asked for a comprehensive description of the quality control procedures to be followed during construction of Unit No. 3. Subsequently, on July 16, 1968, we asked a detailed series of questions on quality assurance as related to construction of the containment vessel. The responses to these questions are contained in Section 5 of the First Supplement (August 30, 1968), Section 6 of the Second Supplement (September 16, 1968), and Section 4 of the Fifth Supplement (November 4, 1968).

Since the time of asking these questions there has been additional emphasis placed on quality assurance requirements during our construction permit reviews particularly as related to the forthcoming Zion hearing. At the present, we plan for a January ACRS review of Indian Point 3. In view of this, as well as the additional emphasis now being placed on quality assurance requirements, please provide, in time for a January ACRS review, your evaluation of the adequacy of the information presented to date or any requirements you may have for additional information or meetings.

D. R. Muller, Chief
Reactor Project Branch #1
Division of Reactor Licensing
