

July 18, 1968

Roger S. Boyd, Assistant Director for Reactor Projects
THRU: D. R. Muller, Chief, Reactor Project Branch #1

INDIAN POINT NUCLEAR GENERATING UNIT NO. 3, DOCKET NO. 50-286

A meeting was held between representatives of Consolidated Edison Company of New York, Inc., United Engineers and Constructors, Westinghouse Electric Corporation, Southern Nuclear Engineering Corporation, New York University, and the regulatory staff on April 16, 1968, to discuss containment design criteria. A list of attendees is attached.

The questions asked the applicant at this meeting were essentially identical to those contained in the memorandum from R. C. DeYoung to R. S. Boyd, dated March 26, 1968, Subject: "Indian Point Nuclear Generating Unit #3, Consolidated Edison Company of New York, N. Y., Preliminary Safety Analysis Report, Docket No. 50-286, Containment and other Structures Structural Problems." In addition to these questions, Mr. Spickler outlined our feelings on tornado design criteria. The question of the tornado removing all the water from the spent fuel storage pit was discussed and we indicated that an evaluation was needed concerning the possibility of storage pool dryout and on the effects of missiles entering the pool. The detailed structural design questions were formally transmitted to the applicant on July 16, 1968.
