T. Novak, Chief, Reactor Systems Branch, L

INDIAN POINT - 3 SITE VISIT OF 7/6/73

- Attendees:
- Westinghouse - Bob Faas
 - WEDCO - Harry Clark
 - Consolidated Edison - R. Koppe, R. Remshaw
S. Zulla (site tour coordinator)
 - AEC - A. Serkiz, C. Sullivan

Visited Indian Point - 3 (IP-3) site to review ECCS systems and to obtain a first-hand view of the IP-3 systems currently under construction. Discussions related to the hydraulic characteristics of the IP-3, ECCS piping systems were held and several additional items such as specific valve characteristics (e.g., butterfly valves in the RHR system). Piping lengths and additional flow delivery data for the IP-2 pump tests were identified for transmittal to REG. The IP-2 "pre-op" pump delivery tests were discussed in detail and a detailed site tour was conducted. The visit was very useful as background information for the technical review of the IP-3 ECCS systems.
