April 8, 1977

Director of Nuclear Reactor Regulation  
ATTN: Mr. Robert S. Boyd, Director  
Division of Project Management  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Gentlemen:

By letter dated March 9, 1977 you requested an updated forecast of any applications we plan to submit for NRC review between now and the end of FY1979 (September 30, 1979). On September 1, 1976 in response to your letter dated July 7, 1976, we transmitted to you a list of anticipated items and their estimated submittal dates, which would require NRC review during the subject period. Item (3) of that list was submitted for NRC review on March 15, 1977.

Your letter dated March 9, 1977 requested for the first time that amendments to operating licenses not be included in our list. Therefore amendments to the operating licenses which should not significantly affect your manpower allocation planning, included in previously submitted lists to the NRC, will not be included in the present update.

The following supersedes the September 1, 1976 list and includes amendments to operating licenses which could have a significant affect on your manpower allocation planning

(1) Indian Point Unit No. 2:

Reload report and associated licensing actions for the second refueling of the unit (November 1977).

(2) Indian Point Unit No. 3:

If justified by the results of the ecological study program, Con Edison and The Power Authority of the State of New York are planning to file an application for a license amendment to extend the period of operation with the once-through cooling system to allow completion of the ecological study program for Indian Point Unit No. 3, and review of the results of this program (November 1977).

8111020138 770916  
PDR ADDCK 05000286  
G PDR

(3) Indian Point Unit No. 3:

Reload report and associated licensing actions for the first refueling of the unit (January 1978).

(4) Indian Point Unit No. 1:

Request for preliminary design approval to store Indian Point Unit No. 2 spent fuel in the Indian Point Unit No. 1 spent fuel pools (January 1978).

(5) Indian Point Unit No. 3:

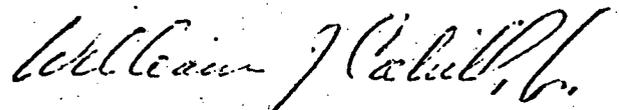

If justified by the results of the ecological study program, Con Edison and The Power Authority of the State of New York intend to file an application for a license amendment to delete the requirement for termination of operation with once-through cooling (January 1979).

(6) Mid-Hudson Site:

If Con Edison decides to proceed with a nuclear power plant at this site it may file an application for early site review by mid-1979.

Should you have any questions on any of the above items, please do not hesitate to contact us.

Very truly yours,

William J. Cahill, Jr.  
Vice President
