Attn: Mr. Roberto Torres

RE: Additional information to License Application; as requested

Mr. Torres,

Thank you for your expeditious review of our NRC license application. In an attempt to provide the requested information in a clear format, I will provide each response referencing the item numbers used in your request document.

As we have previously discussed, BBES provides a variety of services that involve the temporary control or possession of radioactive materials on client sites. At no time does BBES take ownership of the material. Additionally, BBES is not currently licensing a facility to perform radiologically licensed activities and therefore we have included a determination statement at the fore front of the following response.

Each remediation project involving radioactive materials is thoroughly planned in advance. At minimum a RWP is written which outlines the requirements for performance of each task. When radioactive materials are of sufficient quantity to be a risk to the uncontrolled environment or the public, or a significant exposure risk to our workers, BBES initiates the additional planning and reviews necessary to minimize that risk.

In the majority of BBES remediation projects involving radioactive materials a Radiological Work Plan is prepared that thoroughly outlines each aspect of the project. The Radiological Work Plan is prepared in addition to the Project Health and Safety Plan and is usually reviewed, approved and/or agreed upon by multiple parties. This review, concurrence and/or approval frequently includes regulatory agencies well before the project work starts.

Under no circumstances will personnel be performing licensed activities without sufficient training and appropriate guidelines that have been thoroughly planned out and documented. The very nature of the BBES remediation tasks performed from project to project varies

significantly and for this reason we place heavy emphasis on project planning, personnel training and program management oversight.

Additionally, the nature of our work requires that all involved parties thoroughly understand their commitments and contractual obligations. It is for this reason that related communications and agreements are routinely documented in the format of project work plans, sampling plans and work tracking documentation.

Please do not hesitate to connect me directly should you have any questions or further need of information. I am at your disposal to aid in our licensing process.

Sincerely,

A handwritten signature in black ink, appearing to read 'Doc Dennis', is written over a horizontal line. The signature is stylized and includes a large loop at the beginning.
