Office of Nuclear Reactor Regulation  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Re: Consolidated Edison Company of New York, Inc.  
(Indian Point Station, Unit No. 2)  
Docket No. 50-247

Dear Mr. Denton:

Consolidated Edison Company of New York, Inc. (Consolidated Edison) transmits herewith forty-three (43) copies of the document entitled, "Preliminary Design Report for Reracking the Indian Point Unit No. 2 Spent Fuel Pool." This document supplements and clarifies the criteria contained in the Consolidated Edison report entitled, "Proposed Design Criteria for Reracking Indian Point Unit No. 2 Spent Fuel Pool", which was forwarded to the NRC by letter dated February 27, 1979. It is anticipated that the final licensing submittal will be forwarded to the NRC by January 1, 1980.

In addition, transmitted herewith are three (3) originals and forty (40) copies of a related "Application for Amendment to Operating License", sworn to on September 7, 1979. This Application requests an amendment to the Operating License and to the Indian Point Unit No. 2 Technical Specifications to reflect a change in the value of the neutron multiplication factor and to incorporate a limit on the maximum fuel loading in the assemblies that are to be stored in the new high density racks.

In accordance with 10 CFR 170.22 , this Application has been determined to be CLASS III, as it involves a single issue and has been deemed not to involve a significant hazards consideration. Therefore, as required by regulation, enclosed is a check in the amount of \$4,000.00 as the filing fee. This

payment is being made under protest, and Consolidated Edison reserves the right to challenge the validity of the imposition of these fees and the basis for the determination of the amounts of the fees.

An Affidavit of Service is enclosed.

Very truly yours,

William J. Cahill, Jr.  
Vice President

APPLICATION FOR AMENDMENT TO  
OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission, Consolidated Edison Company of New York, Inc. ("Consolidated Edison") as holder of Facility Operating License No. DPR-26, hereby applies for an amendment to Section 2.B of the Indian Point Unit No. 2 Operating License, and an amendment to the Technical Specifications contained in Appendix A to that license.

The proposed changes to Section 2.B of the license, contained in Attachment A to this Application, would modify the license to include this proposed amendment.

In addition, Consolidated Edison requests that Technical Specifications 5.3 and 5.4 be modified to reflect a change in the value of the neutron multiplication factor and to incorporate a limit on the maximum fuel loading in the assemblies that are to be stored in the proposed high density racks.

The proposed Technical Specification changes consist of the specific revisions set forth in Attachment B to this Application. A Safety Evaluation of the proposed changes is set forth in Attachment C to this Application. This evaluation demonstrates that the proposed changes do not represent a significant hazards consideration and will not cause any change in the types or increase in the amounts of effluents or any change in authorized power level of the facility.
