OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

AMENDMENT NO. 2 TO
APPLICATION FOR AMENDMENT TO
OPERATING LICENSE

72 ADOK

On February 9, 1979, Consolidated Edison Company of New York, Inc. ("Consolidated Edison"), as holder of Facility Operating License No. DPR-26, filed with the United States Nuclear Regulatory Commission ("NRC") an "Application for Amendment to Operating License", sworn to by Mr. William J. Cahill, Jr. on February 9, 1979. That Application requested changes to Table 3.12-1 of the Indian Point Unit No. 2 Technical Specifications to reflect redesign of the support systems of certain safety-related pipe lines for the purpose of improving the reliability of those support systems. By Amendment No. 55 to DPR-26, dated June 12, 1979, the NRC Regulatory Staff issued its approval of a significant portion of the proposed support system redesigns and deferred consideration of the remaining portion to a future time.

On December 31, 1979, Consolidated Edison filed with the NRC "Amendment No. 1 to Application for Amendment to Operating License" which modified the February 9, 1979 Application to reflect completion of plant modifications approved by Amendment No. 55, seismic reanalyses of certain pipe lines, and certain editorial and technical changes. Attachment A to the December 31, 1979 Amended Application provided a complete package of updated proposed Technical Specification page changes for both Table 3.12-1 and Specification 4.12.1. These updated page changes incorporated those changes still outstanding from the original February 9, 1979 Application.

The present "Amendment No. 2 to Application for Amendment to Operating License" modifies proposed pages 2 of 14, 3 of 14 and 11 of 14 of Table 3.12-1 as contained in Attachment A of the December 31, 1979 Amended Application to reflect additional support system redesign for two safety-related pipe lines. Attachment A to the present Amended Application contains the specific revised page changes for pages 2,3 and 11 of Table 3.12-1. All other proposed technical specification page changes remain as presented in the December 31, 1979 Amended Application.

A Safety Evaluation of the proposed changes is set forth in Attachment B to this Amended Application. This evaluation demonstrates that the proposed changes do not represent a significant hazards consideration and will not cause any change in the types or an increase in the amounts of effluents or any change in the authorized power level of the facility.
