CONSOLIDATED EDISON COMPANY ) Docket No. 50-247  
OF NEW YORK, INC. )  
(Indian Point Station, )  
Unit No. 2) )

APPLICATION FOR AMENDMENT  
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Consolidated Edison") as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, Consolidated Edison requests that Technical Specification 1.10.a be modified to extend, on a one-time basis, the 3.25 total time interval limit over three consecutive surveillance intervals to allow testing of various systems/components to be performed during the scheduled 1986 refueling/maintenance outage rather than requiring a special plant shutdown solely to perform these tests.

The specific proposed Technical Specification revisions are set forth in Attachment A to this Application. A Safety Assessment of the proposed changes is set forth in Attachment B to this Application. This assessment demonstrates that the proposed changes do not represent a
