Re: Indian Point Unit No. 2  
Docket No. 50-247

U. S. Nuclear Regulatory Commission  
Document Control Desk  
Washington, D. C. 20555

Dear Sirs,

Consolidated Edison Company of New York, Inc. transmits herewith a signed original and thirty seven (37) copies of the document entitled, "Application for Amendment to Operating License" sworn to on May 20, 1987. This application would modify Indian Point Unit No. 2 Technical Specification 3.4.B relating to the limiting conditions for operation of the Auxiliary Feedwater Pumps to be consistent with the Standard Technical Specifications.

In addition, the pages of the technical specifications affected by this application as submitted herewith include proposed revisions which were submitted by two prior technical specification applications which have not yet been issued. The first was submitted on December 8, 1986 regarding limiting conditions of operation for the main steam safety relief valves. The second was submitted on March 24, 1987 regarding revised flow for the Auxiliary Feedwater System limiting condition for operation. The current application includes a composite of proposed page changes from the prior submittals, which are shown by a single change bar. The current proposed page changes are shown by a double change bar, and are addressed in the Safety Assessment, Attachment B.

In accordance with 10 CFR 170.12, the appropriate filing fee is enclosed. An Affidavit of Service attesting to state and local notification as required by 10 CFR 50.91 is attached.

We request your expeditious approval of this proposed amendment.

Very truly yours,

Murray Selman  
Vice President
