Re: Consolidated Edison Company of New York, Inc.
Indian Point Unit No. 2 (DPR-26)
Docket No. 50-247
Steam Generator Tube Repair Technical Specifications

Gentlemen:

Transmitted herewith are the original and two (2) copies of an "Application for Amendment to Operating License", sworn to on June 22, 1987. This Application requests an amendment to the Indian Point Unit No. 2 Technical Specifications.

The proposed Technical Specification changes, contained in Attachment A to this Application, revise the steam generator tube inservice surveillance program to authorize (but not require) sleeving as a repair technique. While we have no present intention to initiate sleeving, we would like the flexibility to utilize sleeving should conditions warrant it based upon subsequent steam generator inspections. The sleeving process to be utilized at Indian Point Unit No. 2 will be submitted for NRC approval prior to its use, if required. A safety assessment is presented in Attachment B to this Application and provides the "No Significant Hazards Considerations" analysis for the proposed amendment.

The appropriate filing fee, in accordance with 10 CFR 170.12 is enclosed.

Very truly yours,

Murray Selman
