

UNITED STATES OF AMERICA
NUCLEAR REGULATORY COMMISSION

In the Matter of)

CONSOLIDATED EDISON COMPANY) Docket No. 50-247
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, we request that Technical Specification 3.1.F.1.b.(6) and 3.1.F Basis be amended to revise the requirements for the radioactivity monitors used for Reactor Coolant system leakage detection and changes to 3.1.F that correct typographical errors, make editorial changes, and repaginate text for spatial uniformity.

These specific proposed Technical Specification revisions are set forth in Attachment A to this Application. A Safety Assessment for the proposed changes is set forth in Attachment B to this Application. This Assessment demonstrates that the proposed changes do not represent a significant hazards consideration as defined in 10 CFR 50.92.(c). Moreover, plant specific analyses have been performed by Westinghouse in support of the Reactor Coolant System leakage detection proposed amendment; these analyses are documented in our submittal dated May 23, 1988.

As required by 10 CFR 50.91(b)(1), a copy of this application and our analysis concluding that the proposed changes do not constitute a significant hazards consideration have been provided to the appropriate New York State official designated to receive such amendments.
