NUCLEAR REGULATORY COMMISSION

In the Matter of)
)
CONSOLIDATED EDISON COMPANY) Docket No. 50-247
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to 10 CFR §50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Consolidated Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, we request that Technical Specification No. 4.16.A be amended to add an additional test requirement for Safety Injection System low head injection line check valves 897A-D and Residual Heat Removal check valves 838A-D. On NRC approval of this proposed amendment, NRC's February 11, 1980 Confirmatory Order Item A.5 will be rescinded pursuant to NRC's July 5, 1985 letter to Con Edison.

The proposed Technical Specification amendment is set forth in Attachment I to this Application. A safety assessment of the proposed amendment is set forth in Attachment II to this Application. This assessment demonstrates that the proposed changes do not represent any "Significant Hazards Considerations" as defined in 10 CFR §50.92(c).

Pursuant to 10 CFR §50.91(b)(1), a copy of this Application and our analysis concluding that the proposed changes do not constitute any "Significant Hazards Considerations" have been provided to the appropriate New York State official designated to receive such amendments.
