SUBJECT: Application for License Amendment to Incorporate Westinghouse
Optimized Fuel Assemblies (OFA)-(TAC No. 69543)

This letter serves to clarify further our September 30, 1988 Application for License Amendment (which was later supplemented by a letter dated December 30, 1989 and clarified by a letter dated January 20, 1989). The application requested an amendment to Indian Point Unit No. 2 Technical Specifications to allow, effective with Cycle 10, a fuel design transition to Westinghouse 15x15 OFA fuel through revisions to the applicable plant operating parameters.

The Application contained a typographical error on proposed Technical Specification Page 3.1.G-1. The unit for the pressurizer pressure was incorrectly set forth as psig instead of psia. This error was uncovered as a result of an in house review of our March 30, 1989 Supplemental Application for License Amendment to increase authorized power. A revised proposed Technical Specification Page 3.1.G-1 is included herewith as Attachment A. The no significant hazards consideration evaluation accompanying our OFA fuel Application is not affected by the corrected value.

Should you or your staff have any question regarding this matter, please contact Mr. Jude G. Del Percio, Manager, Regulatory Affairs.

Very truly yours,
