)
CONSOLIDATED EDISON COMPANY) Docket No. 50-247
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, Con Edison requests that surveillance intervals for the Turbine Steam Stop and Control Valves be increased from monthly to yearly and that both the limiting operating conditions and surveillance requirements for the Independent Electrical Turbine Overspeed Protection System be eliminated.

The specific proposed Technical Specification revisions are set forth in Attachment A to this Application and includes a correction to a minor typographical error. Specifically "Turbine Steam Stop Control Valves" was changed to read "Turbine Steam Stop, Control Valves" in Table 4.1-3. This is consistent with the original Technical Specification description. The Safety Assessment of the proposed changes is set forth in Attachments B and C to this Application. This assessment demonstrates that the proposed changes do not represent a significant hazards considerations as defined in 10 CFR 50.92(c). Attachment D provides an evaluation of the impact on the WCAP-11525 analysis for a design overspeed condition of 133% which is the licensing basis for Indian Point Unit No. 2. This evaluation concludes that the analysis results are still valid due to conservative quantification of missile ejection probabilities given design overspeed at 132%.

As required by 10 CFR 50.91(b)(1), a copy of this application and our analysis concluding that the proposed changes do not constitute a significant hazards consideration have been provided to the appropriate New York State officials designated to receive such amendments.
