Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

SUBJECT: Proposed Technical Specification Change for The
Control Room Air Filtration System

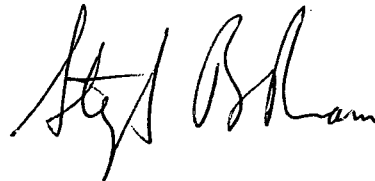

Transmitted herewith are the original and two (2) copies of
an "Application for Amendment to the Operating License",
sworn to on December 30, 1991. This application requests an
amendment to the Con Edison, Indian Point Unit No. 2
Technical Specifications.

The specific proposed Technical Specification changes are
set forth in Attachment I to this Application. The proposed
changes would modify the Control Room Air Filtration System
Technical Specification to delete the requirement to monitor
hydrogen cyanide and to increase the existing anhydrous
ammonia monitor alarm/trip setpoint from 3.5 ppm to 25 ppm.

A Safety Assessment, presented in Attachment II to this
Application, provides the "No Significant Hazards
Consideration" determination for the proposed amendment.

Should you or your staff have any questions, please contact
Mr. Charles W. Jackson, Manager, Nuclear Safety and
Licensing.

Very truly yours,
