NUCLEAR REGULATORY COMMISSION

In the Matter of)
)
CONSOLIDATED EDISON COMPANY) Docket No. 50-247
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license.

Specifically, we request that Technical Specification 3.14 be amended to incorporate a clarification to the limiting condition for operation (LCO) for a severe hurricane condition. This clarification is requested primarily as a result of our review of the local high wind history at Indian Point, current hurricane tracking techniques and historical hurricane tracking data in relation to the existing technical specifications. In light of current available hurricane tracking techniques, we also propose revision of Technical Specification 4.17 to reflect our plans for more frequent monitoring of relevant hurricanes as they travel North along the Atlantic coast.

The specific proposed Technical Specification revision is set forth in Attachment A to this Application. A Safety Assessment of the proposed changes is set forth in Attachment B to this Application. This assessment demonstrates that the proposed changes do not represent a significant hazards consideration as defined in 10 CFR 50.92(c) and will not cause any change in the types or an increase in the amounts of effluents or any change in the authorized power level of the facility.

As required by 10 CFR 50.91(b)(1), a copy of this application and our analysis concluding that the proposed changes do not constitute a significant hazards consideration have been provided to the appropriate New York State official designated to receive such amendments.
