Re: Indian Point Unit No. 2
Docket No. 50-247

Mr. Darrell G. Eisenhut, Director
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Eisenhut:

This letter confirms recent discussions we have had with members of your staff regarding a section of our implementation plan submitted on April 15, 1983 in response to Supplement 1 to NUREG-0737. In the plan as submitted, we committed to provide a program plan for the Detailed Control Room Design Review (DCRDR) in February 1984 and the summary report by July 1986. The schedule for these submittals was based on the amount of work involved, the availability of management and engineering resources and a reasonable integration of all of the Supplement 1 initiatives.

As discussed with members of your staff on August 23, 1983, we will be in a better position as this program progresses to establish a more realistic date for the submittal of the summary report, now committed for July 1986. Recognizing the Staff's interest in an earlier submittal date, we agreed to reassess this matter at a later date, but no later than July 31, 1984. We will confirm this date in our February, 1984 submittal. We are unable at this time to provide a firm commitment to better our earlier estimated date for submittal of the summary report; however, we assure you that our best efforts will be exerted toward this objective.

Very truly yours,

for John D. O'Toole
Vice President
