Re: Indian Point Unit No. 2
Docket No. 50-247

Director of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

ATTN: Mr. Steven A. Varga, Chief
Operating Reactors Branch No. 1
Division of Licensing

Dear Mr. Varga:

Transmitted as Attachment A to this letter is the Indian Point Unit No. 2 Inservice Testing Program Summary for the period July 1, 1984 through June 30, 1994. As required by 10 CFR 50.55a, this revised program summary reflects the periodic updating necessary for conformance with the applicable edition and addenda of the ASME Boiler and Pressure Vessel Code Section XI. Where certain testing requirements have been determined to be impractical, relief from the requirement has been requested and our basis for the request provided. In such instances, and where practical, alternative methods or frequencies of testing have been proposed.

Transmitted as Attachment B to this letter is a revision to a previously proposed Technical Specification change request submitted to NRC by letter dated May 5, 1977. The previously proposed change would have replaced the existing Inservice Inspection Program contained in Section 4.2 of the Technical Specifications with a commitment to an Inservice Inspection and Testing Program and periodic updating, consistent with 10 CFR 50.55a. That proposed change was never issued or approved by NRC. This revision of the previously proposed change is necessary due to subsequent changes in the periodic updating schedule contained in 10 CFR 50.55a.

Your early review of these submittals is requested. Should you or your staff have any questions, please contact us.

Very truly yours,

John D. O'Toole
