Indian Point Unit No. 2 Docket No. 50-247

Director of Nuclear Reactor Regulation U. S. Nuclear Regulatory Commission Washington, D. C. 20555

ATTN:

Mr. Steven A. Varga, Chief Operating Reactors Branch No. 1

Division of Licensing

Dear Mr. Varga:

Your May 28, 1985 letter forwarded the NRC Staff's Safety Evaluation on the new Westinghouse small break LOCA model, NOTRUMP. This code was developed by Westinghouse for the Westinghouse Owners Group (WOG), of which Con Edison is a member, and is the new licensing model satisfying the requirements of NUREG-0737, Item II.K.3.30.

In order to satisfy associated Item II.K.3.31 of NUREG-0737, we understand that the NRC Staff and Westinghouse reached agreement on a set of generic studies which will be performed in lieu of plant specific analyses. NRC Generic Letter No. 83-35 permits generic resolution of Item II.K.3.31 provided generic analyses can demonstrate that previous small break LOCA analyses performed with the Westinghouse WFLASH code provide more conservative results than the new NOTRUMP code. Accordingly, Westinghouse plans to benchmark NOTRUMP model results with WFLASH model results for certain generic plant cases and to demonstrate that NOTRUMP model peak clad temperatures (PCTs) are bounded by WFLASH model PCTs.

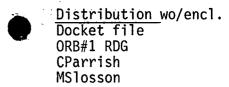

These generic analyses will be applicable to Indian Point 2 and thus will serve as Consolidated Edison's response to Item II.K.3.31. We understand that Westinghouse/WOG plans to submit the above analyses to NRC in May, 1986 in compliance with the schedule established by Item II.K.3.31.

Should you or your staff have any questions, please contact us.

Very truly yours,

0

Re: Indian Point Unit No. 2 Docket No. 50-247

Dr. Thomas E. Murley, Regional Administrator Region I U. S. Nuclear Regulatory Commission 631 Park Avenue King of Prussia, PA 19406

Dear Mr. Murley:

Enclosed please find one (1) copy of Indian Point Unit No. 2 Changes, Tests and Experiments for the year 1983 as required by 10 CFR 50.59(b).

Very truly yours,

Murray Selman
