Re: Indian Point Unit No. 2
Docket No. 50-247

Director of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

ATTN: Ms. Marylee M. Slosson, Project Manager
PWR Project Directorate No. 3
Division of PWR Licensing - A
Office of Nuclear Reactor Regulation

Dear Ms. Slosson:

This letter is in response to your letter dated September 19, 1986, which served to transmit the NRC staff Safety Evaluation Report (SER) of the Westinghouse Owner's Group generic design for the ATWS mitigation system actuation circuitry (AMSAC). In that letter, NRC requested that Consolidated Edison review the Safety Evaluation, and provide within 30 days of receipt of that letter, a schedule for addressing the plant specific design features discussed, in Appendix A to that Safety Evaluation, and for implementation following the staff's approval of Consolidated Edison's plant specific design.

By letter dated October 13, 1985, Consolidated Edison submitted a proposed schedule for implementing the new requirements as required by 10 CFR 50.62. That letter stated, in pertinent part, that we intend to submit a description of the final design and implementation schedule within six months of receipt of the NRC's SER on the generic AMSAC submittal. In a letter dated July 16, 1986, the Westinghouse Owners Group transmitted that SER to Consolidated Edison. Accordingly, we plan to submit our description of the final design and implementation schedule by January 16, 1987. At present, our target date for implementation of the AMSAC system is the 1989 Refueling Outage; however, that target period assumes NRC's acceptance of the plant specific design as will be proposed.

Should you or your staff have any questions, please contact us.

Very truly yours,

Murray Selman
