Subject: Quality Assurance Program, Revision No. 7

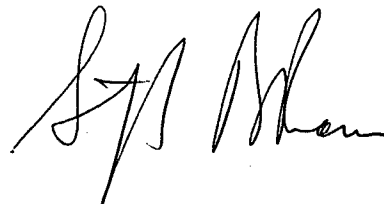

Pursuant to 10 CFR 50.54, we are submitting as an attachment to this letter a description of our current Quality Assurance (QA) program. Attachment I, entitled "Quality Assurance Program - Revision 7", contains our revised program and supersedes Revision 6 which was submitted to you on December 30, 1988. Revision 7 incorporates recent corporate organizational and operational changes, and minor editorial changes to reflect actual conditions where applicable. Attachment II, entitled "Summary of Changes", briefly summarizes the changes made.

These changes were the subject of a meeting with the NRC staff on December 18, 1989. As discussed at this meeting, it is Con Edison's intent to verify the proper implementation of any new functional responsibilities prior to changing the participation of the Q/A organization.

We believe the program changes represent an enhancement in our QA program. We have performed an evaluation as required by 10 CFR 50.54 (a) (3) and believe that all requirements prescribed by 10 CFR 50 Appendix B, and Regulatory Guides and ANSI standards listed in the QA Program Description are satisfied. As a result of our 50.54 (a) (3) review, we believe that one of our proposed changes, (Page 19), reflecting an in-line redundant Q/A review of plant modification documentation requires NRC approval. We request your concurrence that this change will result in a worthwhile enhancement to our program.

Should you or your staff have any questions, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

9001120246 891227
