Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

SUBJECT: Shift Staffing

By letter, dated March 23, 1990, Con Edison notified the NRC of its intent to delete the two dedicated maintenance positions assigned around the clock to fulfill the Supplement 1 to NUREG-0737 mechanical maintenance function in the initial hour of a potential emergency. This notification to the NRC was made following our determination that this change would not decrease the effectiveness of the Emergency Plan.

In subsequent discussions with Region I we were advised that bases other than those used in our determination might lead to the conclusion that prior approval should be requested. Therefore, we are supplementing our letter of March 23, 1990 and requesting approval pursuant to 10 CFR 50.540 prior to implementation of this change in shift staffing function.

If approved, it is our intent to implement this change at the conclusion of the 1990 mid cycle steam generator outage. Therefore, your prompt consideration of this request would be appreciated. If there are any questions please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

cc: Mr. Thomas T. Martin
