SUBJECT: NRC Generic Letter 88-20, Supplement 1:
Individual Plant Examination of External Events
(IPE) for Severe Accident Vulnerabilities - 10 CFR
50.54(f)

NRC Generic Letter 88-20, Supplement 1, dated August 29, 1989 requested additional information from each licensee in the form of an Individual Plant Examination of their nuclear facility.

Our initial response dated October 27, 1989, indicated that we would be utilizing the probabilistic risk assessment approach and provided an anticipated schedule based upon the expected scope of work and the need to integrate that schedule with ongoing use of the existing PRA insights in supporting plant applications. While our anticipated schedule was slightly shorter than the three year time window discussed in the Generic Letter, the effort required to complete the IPE was somewhat larger than expected. The technical evaluation effort is complete and the Tier 1 documentation required for submittal is now being prepared. Based upon this, we fully expect to submit the final report by August 29, 1992, consistent with the time frame established in the generic letter.

Should you have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

36000
