Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

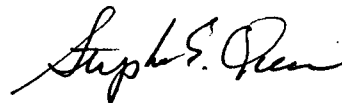

SUBJECT: Response to Request for Additional Information (RAI),
Steam Generator Tube Acceptance Criteria Technical
Specification Amendment Request

By letter dated November 21, 1994, the Nuclear Regulatory Commission requested additional information to enable completion of their review of Consolidated Edison Company of New York's (Con Edison) April 13, 1994 proposed amendment to Technical Specifications involving steam generator tube sleeving and acceptance criteria for Indian Point Station, Unit 2. The Con Edison response to the RAI was transmitted by letter dated December 20, 1994.

This letter clarifies the response to Question #8 in the RAI and forwards the proposed Technical Specification page 4.13-2. Question 8 requested that the word "imperfections" be replaced with "degradation" in the definition of an F* tube. This is the only change to this proposed page when compared to the original April 13, 1994 submittal. Revision bars on this attached page reflect changes from the approved current Technical Specifications for Indian Point Nuclear Generating Unit No. 2.

Should you have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,
