SUBJECT: Supplemental Information to Proposed Amendment to Technical  
Specifications Regarding Steam Generator Tube Inservice Inspection  
Frequency

Reference: Con Edison Letter to USNRC dated February 14, 1996

This letter transmits a revised page containing supplemental information to a proposed amendment to the Indian Point Unit No. 2 Technical Specifications that would permit a one-time only extension of the current steam generator tube inservice inspection cycle. The proposed amendment was provided to your staff for consideration by our letter dated February 14, 1997. Specifically, we have added an additional sentence to the proposed footnote on page 4.13-2 of the Technical Specifications concerning the required completion of steam generator examinations scheduled during the 1997 refueling outage. This supplemental information is intended to provide confirmation to the NRC staff that the scheduled steam generator examinations will be completed prior to return to service from the 1997 refueling outage. This supplemental information is editorial in nature and does not change the conclusions drawn earlier that the proposed changes do not constitute a significant hazards consideration as defined by 10 CFR 50.92.

Should you have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,
