

UNITED STATES OF AMERICA
NUCLEAR REGULATORY COMMISSION

In the matter of)

CONSOLIDATED EDISON COMPANY)
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

Docket No. 50-247

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, Con Edison requests that the change specified in Attachment A to this submittal be approved. The proposed change would permit a one-time only extension of the steam generator tube inservice inspection frequency for fuel cycle 14. Additionally the proposed administrative change would delete the requirement to receive NRC concurrence of the proposed steam generator examinations.

The specific proposed change to the Indian Point Unit No. 2 Technical Specifications is to Sections 4.13A.2.a, and 4.13C.1 as set forth in Attachment A to this Application. A Safety Assessment of the proposed change is set forth in Attachment B to this Application. This assessment demonstrates that the proposed change does not represent a significant hazards consideration as defined in 10 CFR 50.92(c).

As required by 10 CFR 50.91(b)(1), a copy of this application and our analysis concluding that the proposed change does not constitute a significant hazards consideration has been provided to the appropriate New York State official designated to receive such amendments.
