Docket No. 50-286
License No. DPR-64

Dear Sir:

The following is a Special Report on Penetration Fire Barriers at Indian Point Unit 3, prepared in accordance with the requirements of Technical Specification 6.9.2.f. The event described is covered by Technical Specification 3.14.C.2.b.

On August 13, 1986, with the plant in the cold shutdown condition, work was begun to make openings in several of the plant's penetration fire barriers. This was for the purpose of executing various plant modifications during a turbine maintenance outage.

Specifically, the affected penetration fire barriers are as follows:

- a. the fire barrier between the Central Control Room floor and the Cable Spreading Room, and
- b. the fire barrier separating the Control Building from the Turbine Building

This list includes all affected penetration fire barriers covered under Technical Specification 3.14.C.1. It also accounts for all openings made during the course of the outage.

As required by Technical Specification 3.14.C.2, continuous fire watches were posted in the Control Room, and hourly fire watches were established and operability of the fire detectors was verified in the Control Building.

Page 2.

All required penetration fire barriers were returned to their functional status, and appropriate surveillance testing was performed to ensure functionality of the penetration fire barriers. This testing was completed by September 18, 1986.

Very truly yours,

W.A. Josiger
