NUCLEAR REGULATORY COMMISSION

In the Matter of)

CONSOLIDATED EDISON COMPANY)
OF NEW YORK, INC.)
(Indian Point Station,)
Unit No. 2))

Docket No. 50-247

APPLICATION FOR AMENDMENT
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of the Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license.

This Application for amendment to the Indian Point 2 Technical Specifications seeks to amend Tables 3.5-3 and 4.1-1 by revising the degraded voltage trip and the underfrequency reactor trip surveillance tests.

The specific proposed Technical Specification Revision is set forth in Attachment I to this Application. Mark-ups of the existing Technical Specifications are provided in Attachment II. A Safety Assessment of the proposed change is set forth in Attachment III to this Application. This assessment demonstrates that the proposed changes do not represent a significant hazards consideration as defined in 10 CFR 50.92(c).

As required by 10 CFR 50.91(b)(1), a copy of this Application and our analysis concluding that the proposed changes do not constitute a significant hazards consideration have been provided to the appropriate New York State official designated to receive such amendments.
