Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

SUBJECT: Third Ten-Year Interval Inservice Inspection
Program

In accordance with IWA-1400(c) of Section XI of the ASME Boiler and Pressure Vessel Code, enclosed is the Indian Point Unit 2 Inservice Inspection (ISI) Program Summary for the period July 1, 1994 through June 30, 2004, which is the third 120 month interval. Not included in the enclosure are Appendices A-C, plant drawings, which will be transmitted under separate cover at a later date, to support NRC review of the program and the relief requests.

As required by 10 CFR 50.55a(a)(2) and (g)(4), this program has been revised to conform with the 1989 edition of the Code, except where relief from certain inspection requirements is sought in accordance with 10 CFR 50.55a(a)(3) and (g)(6) and Technical Specification 4.2.2.

Response to relief requests 1, 2, 3, 29 and 33 is needed to support repairs and replacements that could be required at any time. In addition, extensive additional planning would be needed prior to the next refueling outage, currently expected to start in January or February, 1995, if relief requests 6 and 11 were to be denied. Therefore, NRC review and response for these seven relief requests is requested prior to the end of the second interval on June 30, 1994. NRC review and response for the remaining relief requests is needed to support the planned 1995 and later refueling outages, and is therefore requested by December 31, 1994.

Should you have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

Thomas Glawice
