United States Nuclear Regulatory Commission
ATTN: Document Control Desk
Washington, DC 20555-0001

**Subject: PSEG POWER, LLC AND PSEG NUCLEAR, LLC
EARLY SITE PERMIT APPLICATION EXPECTED SUBMISSION DATE**

References: 1) PSEG Power, LLC letter to USNRC Dated December 2, 2008,
"Update to Letter of Intent Dated January 31, 2008"

2) USNRC Regulatory Issue Summary 2009-03, Process for
Scheduling Acceptance Reviews of New Reactor Licensing
Applications After April 2009 and Processes for Determining
Budget Needs for Fiscal Year 2011, dated February 12, 2009

In Reference 1, PSEG Power, LLC notified the NRC of the intention of PSEG Power LLC (PSEG) to submit an application for an Early Site Permit to the NRC during the second quarter of 2010.

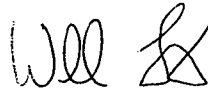

In accordance with Reference 2, this letter is to inform the NRC that PSEG Power, LLC and PSEG Nuclear, LLC (PSEG) intend to submit an ESP application for the proposed PSEG site on or before May 28, 2010. PSEG has not selected a particular reactor design to be constructed at the site; therefore, the application uses the Plant Parameter Envelope approach. This approach establishes a surrogate plant in the form of a set of bounding parameters. The application includes a complete and integrated emergency plan, and does not include an LWA.

3) PSEG Power, LLC letter to USNRC dated February 11, 2010
