John Ahearn
Nuclear Regulatory Commission
717 H. St., N.W.
Washington, D.C. 20555

Dear Mr. Ahearn,

Please reject Harold Denton's
vision not to shut down Indian
int nuclear power station.

I am requesting that an Atomic
Safety and Licensing Board be formed.
This board should compile a factual
record concerning the items on the
petition of Concerned Scientists petition.

(35)

3005010/80

1
I am requesting that this be
one through adjudicatory hearings
and that it becomes the basis of
refining procedural safeguards at
the plant.

I request that it be the
Commissioners who make the decision
The Union of Concerned Scientists
petition not the Licensing Board.
The ~~Licensing~~ Licensing Board should
only be concerned with fact
gathering.

I request that plant operations
be suspended until the Commissioners
have made their final decision.

I would also request that
hearings be held within the affected
vicinity of the plant so that those
living some distance downwind
from the plant might express our

concerns.

I request that this all be done with all possible speed.

Living thirty - ~~five~~ five miles down wind from a plant with such poor safety and operating record.

A matter of great concern to me. Wind blown radiation will not stop at the Connecticut state line though it would seem that all official concern and responsibility does.

I begin to think that the agencies responsible for my well-being are not living up to their responsibilities.

It makes me very unhappy that some of my tax monies are being used in such an irresponsible fashion.

Thank you for bearing me.

Sincerely,
Stephen T. Wright
