

2-26-80

John Ahern
Nuclear Regulatory Commission
7 H Street NW
Washington, D.C. 20555

Mr Ahern:

Please revert Harold
Anton's decision not to shut
on Indian Point nuclear power
station. I also request the following:
- that an Atomic Safety and
licensing Board be set up
- that a Factual Record be
compiled by said board of
the items on the Union of
Concerned Scientists petition
- that this be done through
quidatory hearings
- that the Record become the

36

8005010195

by means of providing procedural
legislation

- that the NRC ~~and~~ make the
decision on the U.S. petition and
to the Licensing Board which
includes public gathering groups.

- suspension of plant operation
until the Commissioners have
made their final decision.

- that hearings be held in
the vicinity of the plant so
that those citizens most affected
may attend.

- that the above be done
with all speed.

I have made the above
requests because I live 35 miles
west of the Indian Point plants
and know that they have had a

my poor safety record. These so-called
unsafe plants could affect the
lives of millions of innocent
citizens many of whom are opposed
to nuclear power and none of which
are asked if they wanted a nuclear
power plant so near by. If fallout
from Chinese bomb tests affects us
how surely the radiation from a
plant such as Indian Point will
affect citizens of New York City and
vicinity. For the sake of 50
million lives I ask you to
act on my requests.
