CONSOLIDATED EDISON COMPANY )  
OF NEW YORK, INC. )  
(Indian Point Station, )  
Unit No. 2) )

Docket No. 50-247

APPLICATION FOR AMENDMENT  
TO OPERATING LICENSE

Pursuant to Section 50.90 of the Regulations of the Nuclear Regulatory Commission ("NRC"), Consolidated Edison Company of New York, Inc. ("Con Edison"), as holder of Facility Operating License No. DPR-26, hereby applies for amendment of the Technical Specifications contained in Appendix A of that license. Specifically, Con Edison requests changes to pages 3.3-6, 3.3-7 and 3.3-21 to revise the operability requirement of the Weld Channel Pressurization System (WCPS) when repairs are determined to be not practicable. The specific proposed Technical Specification revisions are set forth in Attachment A to this Application. A Safety Assessment of the proposed changes is set forth in Attachment B to this Application. This Safety Assessment demonstrates that the proposed change does not represent a significant hazards consideration as defined in 10 CFR 50.92(c).

Consolidated Edison requests that this application be processed on an emergency basis, in accordance with 10 CFR 50.91(a)(5), prior to April 15, 1993. An emergency situation exists because the current scheduled date for bringing the RCS temperature above 200°F during return to service following the current refueling outage is April 16, 1993. There are leaks in the WCPS for which practicable repairs are not now known and it is necessary for NRC to act in a timely way to allow resumption of plant operation on the scheduled date. As required by 10 CFR 50.91(b)(1), a copy of this application and our analysis concluding that the proposed changes do not constitute a significant hazards consideration have been provided to the appropriate New York State official designated to receive such amendments.
