Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

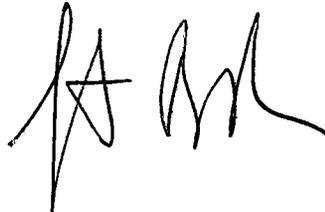

SUBJECT: Proposed Amendment to Indian Point Unit 2
Technical Specifications to Facilitate the use of
VANTAGE+ and Reconstituted Fuel

By letter dated December 10, 1993, Con Edison requested an amendment to the Indian Point Unit 2 Technical Specifications. This proposed amendment would facilitate the use of VANTAGE+ and Reconstituted Fuel. As part of the amendment request, four proposed amended pages were submitted. Since the submittal, changes to one of these pages has become necessary due to the NRC's approval on July 26, 1994 of Amendment No. 173. Another change to this page is a revision to the wording of a basis statement. Therefore, enclosed is a new proposed amended page (page 2.1-2) which has been updated to include Amendment No. 173 and the revised wording in the basis. The other three pages remain valid as is.

Since the updated page only reflects the previously approved Amendment and a change to a basis statement, this change has no safety effect on the previously submitted application, including the Safety Assessment and No Significant Hazards Analysis.

Should you or your staff have any questions regarding this matter please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

220068
