Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

SUBJECT: Amendment No. 174 to Technical Specification Regarding
Extended Containment Isolation Valve Leak Testing to
Accommodate a 24 Month Operating Cycle

In a Con Edison letter dated January 28, 1994, we transmitted an Application for Amendment to the Operating License for the subject proposed Technical Specification changes. These proposed changes, among other things, inserted text into a Technical Specification page which affected the next page. This affected page was not included in the transmittal. In an NRC letter dated July 29, 1994, NRC issued Amendment No. 174 approving these changes to the Technical Specifications.

The purpose of this letter is to transmit Technical Specification page 4.4-10. This page includes text which had been on the previous page and contains no new changes.

Should you or your staff have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,
