Re: Indian Point Unit No. 2
Docket No. 50-247

Document Control Desk
US Nuclear Regulatory Commission
Mail Station P1-137
Washington, DC 20555

SUBJECT: Amendment No. 173 to Technical Specification Pursuant to
Generic Letter 88-16

In a Con Edison letter dated September 29, 1993, we transmitted an Application for Amendment to the Operating License for the subject proposed Technical Specification changes. This transmittal was subsequently supplemented by a Con Edison letter dated April 1, 1994. These proposed changes were based on the Technical Specifications pages which were current at the time of the submittal. Since then, some of these Technical Specifications pages were amended for other reasons. In a letter dated July 26, 1994 NRC issued Amendment No. 173 approving these changes to the Technical Specifications.

The purpose of this letter is to transmit Technical specification pages i, ii, v and 6-27. These pages have been reconciled with the most current amended Technical Specifications and with the exception of the administrative table of contents changes contain no new changes.

Should you or your staff have any questions regarding this matter, please contact Mr. Charles W. Jackson, Manager, Nuclear Safety and Licensing.

Very truly yours,

Stephen E. Quinn
