**Cc:** Burkhardt, Janet; Lent, Susan  
**Subject:** Acceptance of LAR for Proposed Emergency Plan Change

Barry and David:

By letter dated January 28, 2010, Entergy Operations, Inc. (Entergy, the licensee) requested an amendment to the Facility Operating License for the River Bend Station, Unit 1 (RBS). The proposed License Amendment Request modifies Entergy's commitment to NUREG-0654, Table B-1, "Minimum Staffing Requirements for NRC Licensees for Nuclear Power Plant Emergencies." Current Table 13.3-17, "Repair and Corrective Actions" of the Emergency Plan only allows that Electrical or Instrumentation & Control technicians may fill these two positions. This change will allow these two maintenance positions on shift to be filled with any combination of the three maintenance craft disciplines. The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

Consistent with Section 50.90 of Title 10 of the Code of Federal Regulations (10 CFR), an amendment to the license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the staff to proceed with its detailed technical review and make an independent assessment regarding the acceptability of the proposed amendment in terms of regulatory requirements and the protection of public health and safety and the environment. If additional information is needed for the staff to complete its technical review, you will be advised by separate correspondence.

If you have any questions, please contact me at (301) 415-1445.
