Subject: Matagorda County water use

Charley,

Below is a table of the total water pumped for the county shown in acre feet for the last four years. This shows actual use reported. The permitted amounts were much higher. We do not have annual permits to compare year to year but we can take our overall 3 year permitted total and divide that by three to get some estimate of actual vs. permitted. Our total permitted amount for 2005-2007 was 259,840. So that divided by 3 would be about 86,600 which is much higher than our use. For 2008 – 2010, we were able to convince our users not try to permit to their realistic needs and we got the total 3 year permitted total down to 153,854 which is a little over 50,000. We do not have use broken down to thermal energy; that is all captured in commercial/industrial. Hope this information will help you.
