ATTN: Mr. E. R. Price, Ass't. Director

REF: A.E.C. LICENSE 29-6033-1 (L63)

Gentlemen:

In order to improve our production efficiency on lead integrity inspection of radiation shielding, we desire to duplicate our present probing equipment to permit dual Gamma Probing on units, whose geometry lends to double scanning, and to conduct simultaneous probing on several units at the same time. This will also assist with our Portable Mobilab, which when field testing will permit probing to continue in our plant.

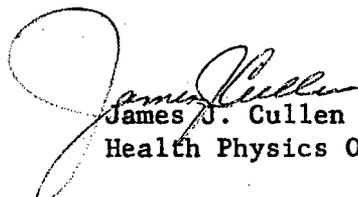

In view of the above, we are requesting an amendment to the subject by-product material license increasing Item No. 8, relative to the maximum amount of radioactivity, which a licensee may possess at any one time, to read - "One source, 2 curies and two sources of 52 curies each." Our proposal is to purchase an additional Cobalt 60, 50 curie sealed source technical operations model A 453-1 with the technical operations model 446 projector. All other conditions of our license would remain unchanged.

Since we are in urgent need of this additional source, we would appreciate your handling this application as soon as possible. If there is any additional information required, concerning this application, please contact the writer.

Thank you for your immediate attention to our application.

Very truly yours,

DUPLICATED
