Importance: High

Thanks Steve.

IOEB should be able to help with this.

Subject: fyi - TMI contamination event

fyi - The Pennsylvania Gov Rendell is asking the NRC Chairman some questions about the TMI contamination event, and the Chairman needs answers today. The Chairman evidently asked Rg I John White/Sam Collins for the answers. Rg I is asking us to support getting answers

Questions:

1. What are the notification protocols?
2. How many contamination events are normal?
3. How many workers are exposed (normally)?
4. How many workers dose exceed 2 rem normally?

sorry, focused on the reporting rather than the HP aspect

details buried in one or more of the attached.
