Subject: "License Amendment Request, License No. 47-25327-01 and Docket No. 03033817"
Date: 03/25/2010

SFK Pulp US INC Fairmont Division would like to request a License Amendment. We have purchased 3 gamma radiation sources, CS-137, 5mCi and three source holders. I have faxed the paper work on the additional sources.

We currently possess three gauges (two SA-1 and one SA-8 gauges) each with </= 50 mCi, and we have obtain two additional SA-8 gauges each with 5 mCi, one additional SA-1 gauge with 5 mCi and request a total of 200 mCi of Cs-137.

Specific License and Termination of General License
On March 2, 2009, I spoke with Craig Caris, Radiation Safety Officer, Ronan Engineering Company. He indicated that your two Ronan Engineering Company Model SA-1 Gamma Gauges (SSDR No. KY576-D-101-B) and your Ronan Engineering Company Model SA-8 Source Holder (SSDR No. KY676-D-105-B) were originally issued for possession under a Specific License (47-25327-01). He clarified that although these units can be distributed under a General License, the installed configuration above a conveyor belt does not prevent physical access into the radiation beam and those types of configurations require use under a Specific License. That make sense. Accordingly, you do not need to continue to maintain your General License, so you can take action to terminate your General License.

Please let me know if I need to complete anything else for this request.

Thanks
Brad Morgan
Radiation Safety Officer
