Subject: AP1000 Response to Request for Additional Information (SRP6.2.2)

Westinghouse is submitting a response to the NRC request for additional information (RAI) on SRP Section 6.2.2. This RAI response is submitted in support of the AP1000 Design Certification Amendment Application (Docket No. 52-006). The information included in the response is generic and is expected to apply to all COL applications referencing the AP1000 Design Certification and the AP1000 Design Certification Amendment Application.

A response is provided herein for RAI-SRP6.2.2-SPCV-31.

Pursuant to 10 CFR 50.30(b), proprietary and non-proprietary versions of the response to the request for additional information on SRP Section 6.2.2 are submitted as Enclosures 3 and 4. Also enclosed is one copy of the Application for Withholding, AW-10-2789 (non-proprietary) with Proprietary Information Notice, and one copy of the associated Affidavit (non-proprietary).

This submittal contains proprietary information of Westinghouse Electric Company, LLC. In conformance with the requirements of 10 CFR Section 2.390, as amended, of the Commission's regulations, we are enclosing with this submittal an Application for Withholding from Public Disclosure and an affidavit. The affidavit sets forth the basis on which the information identified as proprietary may be withheld from public disclosure by the Commission.

Correspondence with respect to the affidavit or Application for Withholding should reference AW-10-2789 and should be addressed to James A. Gresham, Manager, Regulatory Compliance and Plant Licensing, Westinghouse Electric Company, LLC, P. O. Box 355, Pittsburgh, Pennsylvania 15230-0355.

Questions or requests for additional information related to the content and preparation of this response should be directed to Westinghouse. Please send copies of such questions or requests to the prospective applicants for combined licenses referencing the AP1000 Design Certification. A representative for each applicant is included on the cc: list of this letter.

Very truly yours,

Robert Sisk, Manager
Licensing and Customer Interface
Regulatory Affairs and Standardization

APPLICATION FOR WITHHOLDING PROPRIETARY
INFORMATION FROM PUBLIC DISCLOSURE

Subject: Submittal of Proprietary and Non-Proprietary Technical Document Information, Response to Request for Additional Information (RAI) on SRP Section 6.2.2

The Application for Withholding is submitted by Westinghouse Electric Company, LLC (Westinghouse), pursuant to the provisions of Paragraph (b) (1) of Section 2.390 of the Commission's regulations. It contains commercial strategic information proprietary to Westinghouse and customarily held in confidence.

The proprietary material for which withholding is being requested is identified in the proprietary version of the subject RAI response. In conformance with 10 CFR Section 2.390, Affidavit AW-10-2789 accompanies this Application for Withholding, setting forth the basis on which the identified proprietary information may be withheld from public disclosure.

Accordingly, it is respectfully requested that the subject information which is proprietary to Westinghouse be withheld from public disclosure in accordance with 10 CFR Section 2.390 of the Commission's regulations.

Correspondence with respect to this Application for Withholding or the accompanying affidavit should reference AW-10-2789 and should be addressed to James A. Gresham, Manager, Regulatory Compliance and Plant Licensing, Westinghouse Electric Company, LLC, P.O. Box 355, Pittsburgh, Pennsylvania, 15230-0355.

Very truly yours,

A handwritten signature in black ink, appearing to read "Robert Sisk".

ENCLOSURE 2

Affidavit

AFFIDAVIT

COMMONWEALTH OF PENNSYLVANIA:

SS

COUNTY OF BUTLER:

Before me, the undersigned authority, personally appeared Robert Sisk, who, being by me duly sworn according to law, deposes and says that he is authorized to execute this Affidavit on behalf of Westinghouse Electric Company LLC (Westinghouse), and that the averments of fact set forth in this Affidavit are true and correct to the best of his knowledge, information, and belief:

Robert Sisk, Manager
Licensing and Customer Interface
Regulatory Affairs and Standardization

Sworn to and subscribed
before me this 31st day
of March 2010.

Notary Public

- (1) I am Manager, Licensing and Customer Interface, Westinghouse Electric Company, LLC (Westinghouse), and as such, I have been specifically delegated the function of reviewing the proprietary information sought to be withheld from public disclosure in connection with nuclear power plant licensing and rule making proceedings, and am authorized to apply for its withholding on behalf of Westinghouse.
- (2) I am making this Affidavit in conformance with the provisions of 10 CFR Section 2.390 of the Commission's regulations and in conjunction with the Westinghouse "Application for Withholding" accompanying this Affidavit.
- (3) I have personal knowledge of the criteria and procedures utilized by Westinghouse in designating information as a trade secret, privileged or as confidential commercial or financial information.
- (4) Pursuant to the provisions of paragraph (b)(4) of Section 2.390 of the Commission's regulations, the following is furnished for consideration by the Commission in determining whether the information sought to be withheld from public disclosure should be withheld.
 - (i) The information sought to be withheld from public disclosure is owned and has been held in confidence by Westinghouse.
 - (ii) The information is of a type customarily held in confidence by Westinghouse and not customarily disclosed to the public. Westinghouse has a rational basis for determining the types of information customarily held in confidence by it and, in that connection, utilizes a system to determine when and whether to hold certain types of information in confidence. The application of that system and the substance of that system constitutes Westinghouse policy and provides the rational basis required.

Under that system, information is held in confidence if it falls in one or more of several types, the release of which might result in the loss of an existing or potential competitive advantage, as follows:

 - (a) The information reveals the distinguishing aspects of a process (or component, structure, tool, method, etc.) where prevention of its use by any of Westinghouse's competitors without license from Westinghouse constitutes a competitive economic advantage over other companies.

- (b) It consists of supporting data, including test data, relative to a process (or component, structure, tool, method, etc.), the application of which data secures a competitive economic advantage, e.g., by optimization or improved marketability.
- (c) Its use by a competitor would reduce his expenditure of resources or improve his competitive position in the design, manufacture, shipment, installation, assurance of quality, or licensing a similar product.
- (d) It reveals cost or price information, production capacities, budget levels, or commercial strategies of Westinghouse, its customers or suppliers.
- (e) It reveals aspects of past, present, or future Westinghouse or customer funded development plans and programs of potential commercial value to Westinghouse.
- (f) It contains patentable ideas, for which patent protection may be desirable.

There are sound policy reasons behind the Westinghouse system which include the following:

- (a) The use of such information by Westinghouse gives Westinghouse a competitive advantage over its competitors. It is, therefore, withheld from disclosure to protect the Westinghouse competitive position.
- (b) It is information that is marketable in many ways. The extent to which such information is available to competitors diminishes the Westinghouse ability to sell products and services involving the use of the information.
- (c) Use by our competitor would put Westinghouse at a competitive disadvantage by reducing his expenditure of resources at our expense.
- (d) Each component of proprietary information pertinent to a particular competitive advantage is potentially as valuable as the total competitive advantage. If competitors acquire components of proprietary information, any one component

may be the key to the entire puzzle, thereby depriving Westinghouse of a competitive advantage.

- (e) Unrestricted disclosure would jeopardize the position of prominence of Westinghouse in the world market, and thereby give a market advantage to the competition of those countries.
 - (f) The Westinghouse capacity to invest corporate assets in research and development depends upon the success in obtaining and maintaining a competitive advantage.
- (iii) The information is being transmitted to the Commission in confidence and, under the provisions of 10 CFR Section 2.390, it is to be received in confidence by the Commission.
- (iv) The information sought to be protected is not available in public sources or available information has not been previously employed in the same original manner or method to the best of our knowledge and belief.
- (v) The proprietary information sought to be withheld in this submittal is that which is appropriately marked in RAI-SRP6.2.2-SPCV-31, in support of the AP1000 Design Certification Amendment Application, being transmitted by Westinghouse letter (DCP_NRC_002844) and Application for Withholding Proprietary Information from Public Disclosure, to the Document Control Desk. The proprietary information as submitted by Westinghouse for the AP1000 Design Certification Amendment application is expected to be applicable in all licensee submittals referencing the AP1000 Design Certification and the AP1000 Design Certification Amendment Application in response to certain NRC requirements for justification of compliance of the safety system to regulations.

This information is part of that which will enable Westinghouse to:

- (a) Manufacture and deliver products to utilities based on proprietary designs.

- (b) Advance the AP1000 Design and reduce the licensing risk for the application of the AP1000 Design Certification
- (c) Determine compliance with regulations and standards
- (d) Establish design requirements and specifications for the system.

Further this information has substantial commercial value as follows:

- (a) Westinghouse plans to sell the use of similar information to its customers for purposes of plant construction and operation.
- (b) Westinghouse can sell support and defense of safety systems based on the technology in the reports.
- (c) The information requested to be withheld reveals the distinguishing aspects of an approach and schedule which was developed by Westinghouse.

Public disclosure of this proprietary information is likely to cause substantial harm to the competitive position of Westinghouse because it would enhance the ability of competitors to provide similar digital technology safety systems and licensing defense services for commercial power reactors without commensurate expenses. Also, public disclosure of the information would enable others to use the information to meet NRC requirements for licensing documentation without purchasing the right to use the information.

The development of the technology described in part by the information is the result of applying the results of many years of experience in an intensive Westinghouse effort and the expenditure of a considerable sum of money.

In order for competitors of Westinghouse to duplicate this information, similar technical programs would have to be performed and a significant manpower effort, having the requisite talent and experience, would have to be expended.

Further the deponent sayeth not.

PROPRIETARY INFORMATION NOTICE

Transmitted herewith are proprietary and/or non-proprietary versions of documents furnished to the NRC in connection with requests for generic and/or plant-specific review and approval.

In order to conform to the requirements of 10 CFR 2.390 of the Commission's regulations concerning the protection of proprietary information so submitted to the NRC, the information which is proprietary in the proprietary versions is contained within brackets, and where the proprietary information has been deleted in the non-proprietary versions, only the brackets remain (the information that was contained within the brackets in the proprietary versions having been deleted). The justification for claiming the information so designated as proprietary is indicated in both versions by means of lower case letters (a) through (f) located as a superscript immediately following the brackets enclosing each item of information being identified as proprietary or in the margin opposite such information. These lower case letters refer to the types of information Westinghouse customarily holds in confidence identified in Sections (4)(ii)(a) through (4)(ii)(f) of the affidavit accompanying this transmittal pursuant to 10 CFR 2.390(b)(1).

COPYRIGHT NOTICE

The reports transmitted herewith each bear a Westinghouse copyright notice. The NRC is permitted to make the number of copies of the information contained in these reports which are necessary for its internal use in connection with generic and plant-specific reviews and approvals as well as the issuance, denial, amendment, transfer, renewal, modification, suspension, revocation, or violation of a license, permit, order, or regulation subject to the requirements of 10 CFR 2.390 regarding restrictions on public disclosure to the extent such information has been identified as proprietary by Westinghouse, copyright protection notwithstanding. With respect to the non-proprietary versions of these reports, the NRC is permitted to make the number of copies beyond those necessary for its internal use which are necessary in order to have one copy available for public viewing in the appropriate docket files in the public document room in Washington, DC and in local public document rooms as may be required by NRC regulations if the number of copies submitted is insufficient for this purpose. Copies made by the NRC must include the copyright notice in all instances and the proprietary notice if the original was identified as proprietary.

ENCLOSURE 4

Response to Request for Additional Information on SRP Section 6.2.2

RAI-SRP6.2.2-SPCV-31-NP

(Non-Proprietary)

WESTINGHOUSE NON-PROPRIETARY CLASS 3

AP1000 TECHNICAL REPORT REVIEW

Response to Request For Additional Information (RAI)

RAI Response Number: RAI-SRP6.2.2-SPCV-31
Revision: 0

Question:

This is a follow on to RAIs-SRP6.2.2-CIB1-26 and 27.

- a) The scale was observed to measure the data with a []^{a,c} tolerance. However, when the []^{a,c} tolerance is discussed in the RAI responses (page 4 of RAI-SRP6.2.2-CIB1-26 and page 3 of RAI-SRP6.2.2-CIB1-27), []^{a,c}. Because these calculated values are based on []^{a,c}, it is expected the uncertainty in the calculated value will be larger than the uncertainty of each scale measurement. Explain why the calculated value has the same uncertainty as the scale, regardless of how many measurements are used in the calculation.
- b) The scale tolerance is stated to be []^{a,c} based on the experimenter's observation of a maximum []^{a,c} drift. Because no statistical analysis was provided and no explanation was given as to why this drift exceeded the manufacturers stated tolerance of []^{a,c}, it cannot be confirmed that the []^{a,c} tolerance includes any margin. Provide a statistical basis for the stated tolerance.

Westinghouse Response:

Answers to both a) and b) are addressed together in the write-up provided below. Note that the words error and uncertainty are used interchangeably and have the same meaning in this document.

This write-up demonstrates that the uncertainty used in WCAP-16914 is highly conservative even when error propagation is taken into consideration. The information provided below shows a statistical analysis of the measurements and takes into account error propagation during the calculations. First to present the theory and methodology, error calculations and propagation are provided for the first calibration analysis presented in RAI-SRP6.2.2-CIB1-26. (It is recommended for the reader to be familiar with RAI-SRP6.2.2-CIB1-26 prior to reading this response.) Then, the theory is applied to calculate uncertainty for one of the concentrations reported in WCAP-16914 (sample WE213-4W reported in Table 7-6) using the statistical analysis methodology presented in this document. The uncertainty calculated here is compared to the conservative uncertainty reported in WCAP-16914, which demonstrates that the uncertainty estimated in WCAP-16914 is conservative.

WESTINGHOUSE NON-PROPRIETARY CLASS 3

AP1000 TECHNICAL REPORT REVIEW

Response to Request For Additional Information (RAI)

Since the uncertainty is associated with the scale and not what material is being measured, measurements in the range of the masses presented for the first calibration were repeated using a beaker with water equivalent in mass to the amounts measured originally. For example, []^{a,c} were weighted out to prepare AIOOH and the measurement presented in RAI-SRP6.2.2-CIB1-26 for that mass was repeated at []^{a,c}. (For this particular measurement water was measured in a beaker and the scale was zeroed out with an empty beaker sitting on the scale.) In total, 8 measurements were made for the first calibration analysis. For each measured mass reported for the first calibration, the measurement was repeated 9 times for a total of 10 measurements and the data is reported in Table 1 along with a statistical average, standard deviation of each sample of data, and the standard error. The statistical average, standard deviation and standard error were calculated as shown in equations 1a to 1c below:

$$\bar{X} = \frac{\sum_{i=1}^N X_i}{N} \quad (\text{Eqn. 1a})$$

where, \bar{X} = average of the data,
 X_i = each data measurement, and
N = number of measurements, which equals 10 for this analysis.

$$\sigma = \sqrt{\frac{\sum_{i=1}^N (X_i - \bar{X})^2}{N-1}} \quad (\text{Eqn. 1b})$$

where, σ = standard deviation.

$$E = \frac{\sigma}{\sqrt{N}} \quad (\text{Eqn. 1c})$$

where, E = standard error.

Next, using the standard errors reported in Table 1, the calculations for the first calibration are repeated here with the error propagated throughout the calculations. Equation 2 is included below, which is the general equation to propagate error during calculations:

$$E_{f(x_1, x_2, \dots, x_N)} = \sqrt{\left[\frac{\partial f(x_1, x_2, \dots, x_N)}{\partial x_1} \right]^2 E_{x_1}^2 + \left[\frac{\partial f(x_1, x_2, \dots, x_N)}{\partial x_2} \right]^2 E_{x_2}^2 + \dots + \left[\frac{\partial f(x_1, x_2, \dots, x_N)}{\partial x_N} \right]^2 E_{x_N}^2} \quad (\text{Eqn. 2})$$

where, $f(x_1, x_2, \dots, x_N)$ is a function of x_1 to x_N ,
 $E_{f(x_1, x_2, \dots, x_N)}$ = error in function f,

WESTINGHOUSE NON-PROPRIETARY CLASS 3

AP1000 TECHNICAL REPORT REVIEW

Response to Request For Additional Information (RAI)

E_{x_1} = error in variable x_1 ,

E_{x_2} = error in variable x_2 , and

E_{x_N} = error in variable x_N .

As could be derived from equation 2, the error propagation for addition and subtraction is:

$$E_{f(x_1, x_2, \dots, x_N)} = \sqrt{E_{x_1}^2 + E_{x_2}^2 + \dots + E_{x_N}^2} \quad (\text{Eqn. 3})$$

Thus, using equation 3, the first calibration analysis is repeated below from RAI-SRP6.2.2-CIB1-26 with the error propagation included. First, performing the calculation for the background solids (note that the errors in the measurements were obtained from Table 1):

Background Sample

[] a.c

Next, evaluating the error propagations in the calculations involving the chemical analysis are shown below where Eqn. 3 is once again used to calculate the error propagations:

Solution Sample

[] a.c

Next, to calculate the error propagation for the calculations below, where a variable is multiplied or divided by a constant, the error propagation equations presented below are used and could be easily derived from equation 2:

WESTINGHOUSE NON-PROPRIETARY CLASS 3

AP1000 TECHNICAL REPORT REVIEW

Response to Request For Additional Information (RAI)

$$E_{f=cx} = CE_x \quad (\text{Eqn. 4a})$$

where C = constant.

$$E_{f=\frac{1}{c}x} = \frac{1}{C}E_x \quad (\text{Eqn. 4b})$$
