Dear Mr. Cahill:

During our meeting with your staff on March 7-9, 1979 at Indian Point Unit No. 2, we agreed that many valves could be deleted from your inservice testing (IST) program since they performed no safety-related function.

As a result, you submitted, by letter dated April 16, 1979, a list of the valves that you propose be deleted from your IST program. We, along with our consultants from Brookhaven National Laboratory, have reviewed your list. We agreed that most of the valves on this list are not safety-related and can be deleted from your IST program.

There are, however, ten valves on your list that we consider safety-related and they should not be deleted. They are 882, 1810, 894A, 894B, 894C, 894D, 898, MS-52, BFD-77 and BFD-78. This information was discussed with Mr. L. Liberatori of your staff during telephone conversations on May 10 and May 11, 1979.

Furthermore, on May 22, 1979, Mr. Liberatori requested that the following sampling system valves be deleted from the IST program since they're not safety-related: 951, 953, 955A, 955B, 974A, 974B, and 975. We agree that these valves can be deleted from the program.

Sincerely,

Original Signed By
