## General Comment

Once the site's PAR is finalized, are there any thoughts to enacting an online, centralized database which will maintain all site specific PARs for public use? This would help promote one message for emergency evacuation procedures, standardize training for the public, and give the utilities and ORO's ready access to source documents.

This way the public could type in their home address to find out which evacuation zone they are in, when/how to evacuate, and understand the fundamentals of staged evacuation.

Also, this website should be tied into social media, as this can be an effective way to provide updates.
